

## **Accelerating equity in Soil Sciences to strengthen the IUSS**

### **SESSION 404001 IUSS 23<sup>rd</sup> World Congress on Soil Science**

The lack of female scientists, especially in positions of responsibility, not only limits the contributions of 50% of human talent to research, innovation, and public policymaking, but also causes gender biases in many studies that can lead to erroneous knowledge or discriminatory developments, and inefficient public policies. **We invite you to raise our voices with constructive proposals to promote equity and inclusion in soil sciences and be part of the change.**

*Our National Scientific Soil Science Societies & Universities must advance by accelerating equity in soil science to strengthen itself, and you are invited to collaborate to achieve it.*

**Deadline for submissions is November 7**
